Journal of Urban Areas Studies

Proprietor: Shahid Bahonar University of Kerman, Faculty of Literature and Humanities

Managing director: Dr. Sadegh Karimi

Editor-in-Chief: Dr. Hossein Ghazanfarpour

Executive manager: Dr. Mohsen Pourkhosravani

Editorial Board:

1. **Dr. Seyyed Ali Badri:** Associate Professor of Geography and Rural Planning, Tehran University
2. **Dr. Mohammad Reza Rezaei:** Associate Professor of Geography and Urban Planning, Yazd University
3. **Dr. Ali Zangiabadi:** Associate Professor of Geography and Urban Planning, Isfahan University
4. **Dr. Mohammad Hossein Saraei:** Associate Professor of Geography and Urban Planning, Yazd University
5. **Dr. Jila Sajjadi:** Associate Professor of Geography and Urban Planning, Shahid Beheshti University
6. **Dr. Ahmad Abbasnejad:** Associate Professor of Geomorphology, Shahid Bahonar University of Kerman
7. **Dr. AliAsghar Abdollahi:** Assistant Professor of Geography and Urban Planning, Shahid Bahonar University of Kerman
8. **Dr. Hossein Ghazanfarpour:** Associate Professor of Geography and Urban Planning, Shahid Bahonar University of Kerman
9. **Dr. Akbar Kiani:** Associate Professor of Geography and Urban Planning, University of Zabol
10. **Dr. Sadegh Karimi:** Assistant Professor of Climatology, Shahid Bahonar University of Kerman
11. **Dr. Saeideh Garrousi:** Professor of Urban Sociology, Shahid Bahonar University of Kerman
12. **Dr. Ali Movahhed:** Associate Professor of Geography and Urban Planning, Kharazmi University
13. **Dr. Jafar Mirkatooli:** Associate Professor of Geography and Urban Planning, Golestan University
14. **Dr. Hossein Negaresh:** Professor of Geomorphology, University of Sistan and Balouchestan

Referees in this issue:

Dr. Akbar Kiani (Associate Professor, University of Zabol), Dr. AbdolMajid Ahmadi (Assistant Professor, Gha-enat University), Dr. Mohammad Hossien Sara-ei (Associate Professor, University of Yazd), Dr. Hossein Ghazanfarpour (Associate Professor, Shahid Bahonar University of Kerman), Dr. Ali Asghar Abdollahi (Assistant Professor, Shahid Bahonar University of Kerman), Dr. Mohammad Reza Karami (Assistant Professor, Payam Noor University), Dr. Omid Mobaraki (Assistant Professor, University of Maragheh), Dr. Sadegh Karimi (Assistant Professor, Shahid Bahonar University of Kerman), Dr. Mostafa Mohammadi.D, (Shahid Chamran University of Ahvaz), Dr. Mohammad Hossien Fathi, (Imamali University), Dr. Mohsen Pourkhosravani (Assistant Professor, Shahid Bahonar University of Kerman), Dr. Safar Gha-ed Rahmati (Assistant Professor, Tarbiat Modares University).

Persian Editor: Dr. Ali Jahanshahi Afshar

English Editor: Dr. Zahra Khozaei Ravari

Journal of Urban Areas Studies is a quarterly.

Print run: 500

Address: Department of Geography and Urban Planning, Faculty of Literature and Humanities, Shahid Bahonar University of Kerman, P.O Box 7616914111

Website: <http://juas.uk.ac.ir/>

Notes to Authors

- 1.**Articles should be written in Persian, along with abstracts and key words in English, and based on the following guidelines. In order for the articles to be reviewed, please forward them to the website of the journal.
- 2.**Only scholarly-research (fundamental or pragmatic) articles will be accepted.
- 3.**Articles should be within the domain of journal's title (Journal of Urban Areas Studies) and the proposed areas, otherwise they would not be considered for review.
- 4.**After registration in the website (<http://juas.uk.ac.ir>), the responsible author must forward two soft copies of the article, one with the name(s) of the author(s), and another nameless copy, along with the recognizance form, to the website. The files must be forwarded in Word 2007, and also in pdf format.
- 5.**The author(s) must undertake not to send the article to any other journal or conference, national or international, till the final result is stated by the referees (it is obligatory to fill up and forward the recognizance form, available on the website, along with the article).
- 6.**Since the articles are vetted double-blindly, name(s) of the author(s) must appear nowhere throughout the article, in the Word or pdf files.
- 7.**The structure of the articles must be arranged as follows: title, abstract in Persian, key words in Persian, introduction, data and methodology, discussion, results, suggestions (if necessary), acknowledgement (in necessary), notes, and references.
- 8.**Titles must be brief and concise, containing a clear expression of the article, typed in B Titr Bold font.
- 9.**Name(s) of the Author(s) must be typed in B Lotus 10 Bold font, double-spaced from the title. Affiliations –including academic rank or study program, specialty, university, city, and country– appear under the title, on the left side.
- 10.**Abstract:the first page of the article is devoted to abstract in Persian and key words. The abstract contains a brief and general account of the article, emphasizing the problem, objectives, methodology, and results, at most in 250 words.
- 11.**Key words in Persian: 3 to 5 words must be chosen so that they can be used in preparing an index.
- 12.**Introduction: begins on the second page.
- 13.**Main body of the article and the references are typed single-spaced on one side of the pages only, in 26 lines of 12 centimeters.
- 14.**Typed in Word XP, articles should not exceed 20 pages (Persian abstract page included).

15.The main body of the articles including introduction, data and methodology, discussion, and results must be typed in B Lotus 13 font. Notes appear after the results and before references.

16.Main titles appear in B Lotus 13 Bold font, and sub-titles in B Lotus 12 Bold font.

17.The Results section briefly and clearly states new scientific findings of the article, at most in two paragraphs.

18.Figures appear clearly with their titles underneath as: Figure 1-...; if necessary, figure references appear in parentheses as: (Reference: Shokouee,1380:50). The font must be B Lotus11.

19.Tables appear clearly in Table Grid format, with their titles above as: Table 1.

20.Mathematic formulas are typed from the left, one size smaller than the main body, and with the phrase “formula (no.)” on the right side. It is necessary to avoid using phrases such as ‘the following formula’, and just refer to the number.

21.In-text citation examples: (Woods, 2005, 17) or (Ghazanfarpour et al, 1392: 55) or (Ward et al,1996, 190).

22.Persian references appear first in B Lotus 12, and Latin references follow in Times New Roman 12. In order to a homogeneous Farsi and English References, the patterns follow:

-Kiani, Akbar., Esmailzadeh, Ali., (1391). **Analysis of aplan for children-friendly cities, from children viewpoints.** Bagh-e Nazar Quarterly, 20, 51-62.

-Ghazanfarpour, Hossein., Paidar, Abouzar., Sharafi, Hojatolah., (1392). **Geography of tourism with emphasis on pilgrimage tourism,** 1sted., Tehran: Nashr-e Nour-e Elm.

-Ward, J.S., Parker, G.R. and Fernandina, F.J., (1996). **Landscape principles and issues to be considered when developing district plan.** European Planning Studies. 25, 189-202.

-Woods, M., (2005). **Rural Geography,** 1sted. Sage Publication, London.

23.The English abstract must appear at the end of the article, on a separate page.

24.A ready-made word format is provided on the website (<http://juas.uk.ac.ir>). It is recommended to download the file and enter your material into it.

25.Journal, the editing of articles, is free.

26.Legally, responsibility for accuracy of the contents, noticed the author/authors.

Date received: 04/07/2016**Date accepted:** 02/10/2016**Abstract**

Kerman is an area with tectonic quakes that has always faced devastating earthquakes. Kerman had experienced the critical situation for students in Bam caused by earthquake, which had 428 casualties of students that were housed in dormitories, as these buildings were not strong enough. After the earthquake, these losses of shelters have demoralized and dispersed the students; therefore, providing temporary shelters ensures security for students. This study aims to determine appropriate places for temporary housing of students after earthquake crisis in regions of 3 and 4 in Kerman. Methodology of the study is based on the nature of descriptive-analytic method and functional objective. In this study, temporary housing centers selection criterion for students were determined through two questionnaires. These questionnaires were given to experts of Red Crescent's population settlement agency, crisis management, and university's eminent professors. Then the criterion was weighted by "Expert Choice" software and different layers' total weight were incorporated using GIS and overlapping model, to specify appropriate places for students' temporary housing. The results showed that the distance from fault index, as its weight is 0.713, is the most significant factor in determining students' temporary settlement centers. According to the final maps of the study, four appropriate places (3 locations in region 3; and 1 place in the region 4 of Kerman) were determined for students' temporary housing.

Keywords: Locating, Temporary Housing, Earthquake, GIS, AHP.

Date received: 19/09/2016**Date accepted:** 20/12/2016**Abstract**

According to UN reports, floods and storms have caused more damages to human settlements than any other natural disasters. Reducing the damages caused by flood became one of the major goals of urban development planning. Jiroft is located in the interconnection of three rivers named Halil, Shur, and Malanti, thus annually, flood causes considerable financial damages to this city. The aim of this study is to prioritize the districts of Jiroft to help managing flood. This research is descriptive-analytic and data were gathered using field and organizational statistics approach. The participants in this study included the natural sources experts, the city planners, and the offices related to crisis management in Jiroft. This sample involves 53 experts and agents. Data were analyzed using WASPAS and WP models. Results showed that the districts are vulnerable because they were developed physically and haphazardly near the rivers. WP model which analyzed quantitative data of the damages caused in districts resulted that the near parts of Halil river, Sarjaz district, and middle districts of Malenti had the most vulnerability in the last three decades. Although WASPAS model results indicated that districts near Halil river and middle districts of the city near Malenti and Shur rivers were the most vulnerable to floods, therefore it is necessary to be the most priority in planning. However, a part of the city that is located near middle sections of Malenti river, Sarjaz district, and districts near Shur river were ranked in 4th to 6th levels of vulnerability. Appropriate protection strategy for controlling the negative impacts of floods in Jiroft requires a combination of structural measures, urban land use and management of upstream utility.

Keywords: Natural Disasters, Floods, Environmental Planning, WASPAS Model, WP Model, Jiroft.

Date received: 24/07/2016**Date accepted:** 30/10/2016**Abstract**

Historical districts of the cities are the most valuable relics from the architecture of old eras that have been built for far many years and have been worn over time and repairing is an inevitable necessity in order to protect them. Therefore, the experts are looking for the hypothesis that repair these buildings without doing any damages. Urban smart growth and sustainable development in the field of tissue regeneration with the support of the old and the suburbs are on the agenda of urban planners. Hence, the smart growth index of the Kashan's traditional market is evaluated. The aim of this study was to investigate the potential indicators of the smart growth in the revitalization of Kashan's traditional market. Kashan's Market is one of the oldest markets in Iran in which the human's physical, typical, mental and spiritual dimensions including local communities and proper areas for walking etc. has been considered. The main method used in this research is based on descriptive-analytical approach by which the criterion was prioritized through ANP technique, "Super Decision" software combined with Entropy, SMART, and WSM coefficients, and vector integration technique. The results show that among the smart growth criterion, multiple use of area and providing places for walking had the highest potential, otherwise the variety of transportations, compact design of buildings, and creating communities with a sense of belonging to the place had the lowest potential in current situation in Kashan market.

Key words: Central Urban Tissue, Resuscitation, Markets, ANP Technique, Entropy Coefficient.

Abstract

When the physical sprawl occurs in a biological range, as an excess of physical needs of the resident's population, it would occupy space or exceed the suburbs. It can be concluded that within the city useless, derelict, deficient, and old spaces will be formed, thus using these spaces would significantly be considered and planned. The purpose of this research is to identify the physical capacities of central part of Minab city by infill development model. This research in terms of goal is functional, and in terms of methodology is descriptive-analytical. Fuzzy Analytic Hierarchy Process technique and Simple Additive Weighting (SAW) method were used in ten questionnaires filled by urban planning experts to prepare layers in Arc GIS. In this process, 12 effective criterions were overlapped: number of the floors, building quality, population density, land use, building age, material type, parts gradation, accessibility to environmental, cultural-religious, educational centers use, and slope and distance from stream; therefore, the final capacity layouts were defined. The results show that capacity percentages of whole central tissues of Minab are minimum capacity of 18.19% including downward average capacity of 18.94% and upward average capacity of 32.64%, and maximum capacity of 30.2% that is the highest percent related to upward average capacity of 32.64% and an area of 201152.2 m².

Key words: Urban Growth, Infill Development, Central Tissue, Capacity Evaluating, Minab City.

Growth and physical development patterns are defined as spatial patterns of human activities and their unreasonable distribution would have adverse effects on the physical-spatial environment of the societies. Many efforts have been done to resolve these negative effects of the outspread physical expansion of cities. The main strategy was smart growth. The research method is descriptive-analytic and correlation. Required data and information were collected through the General Census of Population and Housing complete and comprehensive, detailed plans of the city. Other sources such as documents, magazines, books related to the subject and different organizations were also used. The data were analyzed through quantitative and qualitative planning models including Shannon entropy weight model and WASPAS model in order to identify the patterns of the growth of city. The aim of this paper was to analyze a physical space based on smart growth **indices** to provide analytical information in evaluated areas in terms of the level of fitness to smart urban growth indices in order to take important steps for achieving urban sustainable development goals through reaching smart growth. Case study is the triple areas of Yazd. The findings of this research showed that the physical growth pattern is outspread and inappropriate, which causes environmental, social, economic, and finally urban instability. According to total indices, the regions 1, 2, and 3 are ranked in 2, 3, and 1 respectively.

Key words: Smart Growth, WASPAS, Ranking, Urban Areas of Yazd.

Abstract

City is a physical-functional space to perform a variety of human activities and its environmental beauty ensures the peace of mind for citizens. Balanced spatial distribution of public places has been a significant major goal for city planners. Therefore, this study aims to analyze the proper accessibility of public places, old parts in region 1, and new parts in region 2 of Kerman comparatively, using sustainable development approach. This study used a descriptive-analytic method that its information was gathered through library and documentary studies and field concepts. Criterion of convenient accessibility to public spaces and urban landscape determines the quality of housing and urban landscape and region 1 and 2 were defined as study area; then, the data were analyzed by software Arc GIS 10.3. AHP model is also used to rank the districts in this study. The results show that districts of new parts (Sarjangaldari with 0.428 and Al-Ghadir with 2 0.304 points) are ranked in first and second, and districts of old parts of Kerman (Naserieh with 0.169 and Qale-Mahmoud with 0.084 points) are ranked in third and fourth position. Finally, according to the results, proper access to public spaces and urban landscape of new parts of Kerman have more desirable status than the old alternatives, and it is necessary to develop a proper planning to increase the desirability of the old parts.

Key words: Old and New tissues, Kerman, AHP Model, Arc GIS Software.

Abstract

Nowadays, cities, as the main place for offering and demanding of goods and services, are turned into focal points of stability. The purpose of this research is to study metropolises in Iran regarding their adaptation to sustainable development index and to conduct an adaptive investigation among them. The method of research is descriptive-analytic. Data of this research were gathered using library and documentary approaches such as yearbooks of statistical center and yearbooks of statistical of metropolis municipalities in Iran. In this investigation, 43 indexes in three environmental, financial, and skeletal sections have been used. In order to analyze the stability level of intended cities, Vikor, Electra, and Topsis model, and the Shanon Entropy model have been used to weight the indexes. The results of combining the three methods using Kaplan technique have shown that Tehran with 4 scores is in prior position, Ahvaz with 2 scores, Isfahan with 0 scores, Tabriz with -1 scores and Mashhad with -4 scores are in subsequent order respectively. Investigation of the set of the research criterion indicated that the involvement level of sustainable development criterion in each city is not homogeneous or invariable, and each city regarding some criteria has better condition compared to the others.

Key words: Sustainable Development, Iran Metropolises, Multi-index Decision Techniques, Kaplan Technique.

Date received: 28/04/2016**Date accepted:** 03/08/2016**Abstract**

Modern municipal engineering is a result of Industrial Revolution in west countries. Primary success of this model in respond for needs of Industry age turned it to dominate paradigm in field of municipal engineering. Therefore, it was considered and simulated by other countries. In addition, tracing and adaptation without contriving caused variety of problems in the cities of our country. Old tissues of city, as settlement spaces created based on traditional architecture were kinds of urban areas that stood against the modernism's model in municipal engineering. One of these effects was the impact of modern municipal engineering in economic and commercial construction of old tissues. In this study, the effects of modern municipal engineering on economic and commercial construction of old tissues in Zanjan city were analyzed. This paper is descriptive and causal (ex- post facto), and library (documentary) and survey (field) methods were used to gather the required information. The results of this study is considered and specified in two positive and negative sections. Positive effects of modern municipal engineering in old tissues of Zanjan facilitated transportation of goods and services and provided the factors of functional changes in traditional market of the city, which is completely described. However, negative results of these effects unbalanced economic and commercial equilibrium and decreased the quality of economic and commercial spaces in old tissues.

Keywords: Modern Municipal Engineering, Old Tissues, Economic and Commercial Construction, Zanjan City.
